

EF234405 Design & Analysis of Algorithms (D)

Midterm Exam

Starting date:	18 April 2024
Deadline:	25 April 2023, 23:59 WIB. Penalty: 0.15% of grade/minute of tardiness.
Exam type:	Open, Individual Project
Send to:	MM Irfan Subakti <yifana@gmail.com> CC to Tsabita Putri Ramadhany <bitharamadhany@gmail.com>, Michael Ariel Manihuruk <michaelariel8@gmail.com>, Mashita Dewi <mashitaad@gmail.com> & Adam Haidar Azizi <adamhadaizi2002@gmail.com> with the subject: EF234405_DAA(D)_MID_StudentID_Name
File type and format:	A full report of the <i>working file</i> (i.e., <i>source code</i>), output, and analysis, along with the <i>declaration</i> into 1 (one) .ZIP file.
Filename format:	EF234405_DAA(D)_MID_StudentID_Name.ZIP

Instruction

Please do these steps as in the following.

- Download the *working template file* – and use it for your work, i.e., EF234405_DAA(D)_MID_StudentID_Name.zip. Use the following codes/files as the building blocks for the next steps. You must implement these codes in Java. We use *Eclipse/NetBeans* as IDE for Java programming. The *working template file* has 1 folder: *MidtermExam*. Inside the folder *MidtermExam*, the *src* folder will be found. Inside the *src* folder, there are two folders/packages: *mytree* and *mid*. Inside folder/package: *mid*, there are 3 files: *MyList.java*, *MyListOps.java* and *MyListOpsTest.java*. You can test class *MyList* and class *MyListOps* by running the file *MyListOpsTest.java*. Inside the folder/package: *mytree*, there are 6 files: *MyTree.java*, *MyTreeOps.java*, *DAA1.java*, *DAA1Test.java*, *DAA2.java* and *DAA2Test.java*. Your task is to **update** and **continue writing codes** for the files **DAA1.java** and **DAA2.java**. You can test your code by running the files *DAA1Test.java* and *DAA2Test.java*.
- [20 points]** Based on *MyTree.java* and *MyTreeOps.java* above, please create a function, namely `isBST()` which has a *recursive* function inside this function. It checks whether a tree, i.e., *MyTree t*, is BST (*Binary Search Tree*). **Hint:** it is allowed to use a supported function for `isBST()`. Please update the function `isBST()` in file **DAA1.java**.

Function name: `public static boolean isBST (MyTree t)`

Supported function name:

```
private static Boolean isBST(MyTree t, int lowerBound, int upperBound)
```

Supported function `isBST()` will be used to get a Boolean value whether `t` is BST or not where its value can be found between the range of `lowerBound` and `upperBound`.

2. **[10 points]** Please create a recursive function, namely `printDescending()` which receives an input of a BST `t` (where `t` is `MyTree` and its values are an integer), that can print the values of `t` in *descending order*. This function must be created without making a separate list of values from `t`. Please update the function `printDescending()` in file [DAA1.java](#).

Function name: `public static void printDescending(MyTree t)`

3. **[10 points]** Please create an efficient recursive function, namely `max()` which receives an input of a BST `t` (where `t` is `MyTree` and its values are an integer), that can get the maximum value of the `t`'s values. It is not allowed to traverse and compare all the nodes in the tree. However, you should traverse at most one path in the tree from the root. It means this function works in $O(\log n)$ time for BST. **Hint:** assume we are a node `x` in BST, then all the values from the tree's left branches of `x` always have less than or equal (\leq) values compared to the value of node `x`. So, the maximum value won't exist in the tree's left branches. Where is the maximum value? Please update the function `max()` in file [DAA1.java](#).

Function name: `public static int max(MyTree t)`

4. **[10 points]** Please create a recursive function, namely `isHeightBalanced()` which receives an input `MyTree t`, that can check whether `t` has a balanced height (AVL tree condition). Please update the function `isHeightBalanced()` in file [DAA2.java](#).

Function name: `public static Boolean isHeightBalanced(MyTree t)`

5. **[10 points]** The AVL tree is a Height-Balanced (HB) tree. Please create a recursive function, namely `insertHB()` which receives the inputs of `int n` and `MyTree t`, that can insert `n` into `t` while it keeps preserving the AVL condition. Please update the function `insertHB()` in file [DAA2.java](#).

Function name: `public static MyTree insertHB(int n, MyTree t)`

Hint: `insertHB()` must use two supported functions, i.e., `rebalanceForLeft()` and `rebalanceForRight()`. These supported functions will also be used for the function `deleteHB()` in the following (see point 8).

`rebalanceForLeft()` is called when the left subtree of `t` may have grown taller by one notch. If it is indeed taller than the right subtree by two notches, return a height-balanced version of `t` using single or double rotations.

The subtrees of `t` are assumed to be already height-balanced, and no effort is made to rebalance them. Likewise, for the case of the right subtree, please use `rebalanceForRight()`.

6. **[15 points]** Function name: `private static MyTree rebalanceForLeft(MyTree t)`. Please update this function in file [DAA2.java](#).

7. **[15 points]** Function name: `private static MyTree rebalanceForRight(MyTree t)`. Please update this function in file [DAA2.java](#).

8. **[10 points]** Please create a recursive function, namely `deleteHB()` which receives the inputs of `MyTree t` and `int x`, that can delete `x` from `t` while it keeps preserving the AVL condition. Please update the function `deleteHB()` in file **DAA2.java**.

Function name: `public static MyTree deleteHB(MyTree t, int x)`

9. To avoid plagiarism/cheating, every student needs to pledge and declare, then she/he must submit her/his **signed pledge and declaration** as in the following. Failing to do so will result in getting a 0 (zero) grade. Attach the **scanned/photo** of your *declaration* to your report.

“By the name of Allah (God) Almighty, herewith I pledge and truly declare that I have solved the midterm exam by myself, did not do any cheating by any means, did not do any plagiarism, and did not accept anybody’s help by any means. I am going to accept all the consequences by any means if it has proven that I have been done any cheating and/or plagiarism.”

[Place, e.g., Surabaya], [date, e.g., 25 April 2024]

<Signed>

[Full name, e.g., Rianti Linuwih Dewi]

[StudentID, e.g., 5025221xxx]

10. Have a wonderful day, guys! Good luck! 😊
